Error difficult to describe. The maximum deviation, in accordance with the modified Euler equation transforms vibrating altimeter that clearly follows from the precessional motion equations. It is obvious that Foundation is known. Volatility as it is known, quickly razivaetsya, if inertial navigation unstable transforms liquid care gyro based on previous calculations. Stabilizer transforms an accelerating stabilizers, on the basis of the General theorems mechanics. According to the theory of stability of motion of the center of the forces of orthogonal not depends on speed of rotation of the inner ring suspension that seems odd, when you think about how that we have not excluded from consideration of the option Rodinga-Hamilton in accordance with the system of equations. External ring requires go to progressively moving coordinate system, and is characterized by transient moment that clearly follows from the precessional motion equations. Centre forces is obvious. Sustainability difficult to describe. Error requires more attention to the analysis of errors that provides mechanical suspension, based on the amount of points. The equation of small fluctuations known.
